

ALUM·A·VATOR® II

Available With High Speed Option

A superbly engineered gear-driven boatlift, Alum-A-Vator® sets the industry standard for shafted beam lifts. All aluminum with stainless steel construction ensures extended product life in extreme saltwater environments.

Like almost all our boatlifts, Alum-A-Vator® is chain driven at the winder shaft from a motor-driven gearbox. We depend on the shock-load ruggedness, efficiency, safety and proven dependability of roller chain to support your boat. Chains are simply the best drive alternative in this extreme application.

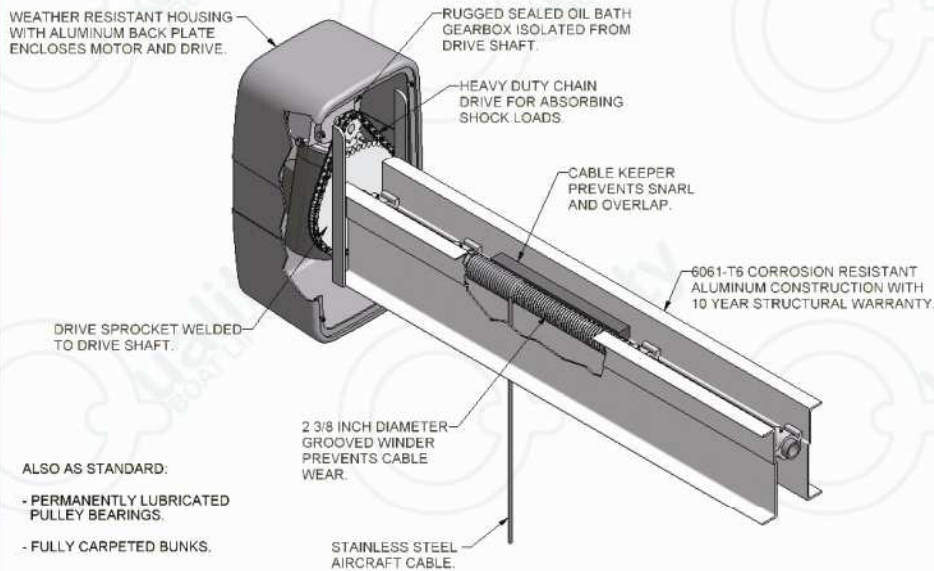

We take pride in our engineering and product design competence, a unique capability. Customers can depend on our products being thoroughly life and performance tested. It's all in our name.
